

The On Demand Delivery System (ODDS) by Turnkey Programming is a valuable addition to our company.

The presentation was very informative and incredibly simple to understand. When ODDS was installed all employee's received individual training.

Turnkey Programming has provided several advantages to our company. Since implementing the On Demand Delivery System program, productivity has increased for drivers, warehouse personnel, and all sales associates. Thanks to the real time calendar, e-mail, and text message options, time is no longer wasted. Searching through files for delivery logs and shipping tickets, running around trying to figure out which stage an order is in, scheduling deliveries on dry erase boards, or phone tag between coordinators and salesman is now a thing of the past.

The option to print detailed reports is a huge benefit. We can see the production of every driver and warehouse associate. Reports are also printed to track our customers, number of shipments, returns, and dollar amounts of orders. Also what type of orders, fill in orders or full framing or trim packages.

Recently Network Car GPS was incorporated with ODDS. Through ODDS job sites are tagged with a perimeter once the truck enters the perimeter the load status changes from "In Transit" to "Unloading" and when the driver leaves the status changes again to "Delivered". This is really helpful for trucks that are delivering multiple orders.

This program is highly recommendable. The versatility of the program is truly remarkable. Turnkey Programming's staff is easy to work with when answering questions, providing technical support, or assisting us in personalizing the program to meet our needs.
